 **Broadcast** powered by Cerkl

Employee Newsletters

A Comprehensive Guide for Internal
Communicators

A no-pressure overview of Cerkl Broadcast. To personalize your experience, here's a sneak-peek at what we'll cover.

✓ **Audience Manager**

Broadcast offers three different ways to upload and manage employee audience and segmentation. Integrating with your existing HRIS, manually uploading .csv files, and our IT-necessary rule-based segmentation.

✓ **Content Control**

Set the priority, frequency, and lifespan of every piece. Send to fixed or interest-based segments on every channel.

✓ **Email Blasts**

Ditch HTML with Broadcast's drag-and-drop email builder. Schedule or immediately send your fully-responsive, branded messages to the correct segments in minutes with full analytics.

✓ **Insights**

Cross-channel and audience analytics on one platform. Filter, track, and share the dashboards that matter most to your team.

✓ **Intelligent Content**

Publish once to all your channels. When an employee interacts with content on one channel, it's marked read on every other channel automatically.

✓ **Deskless Workforce**

White-labeled native iOS and Android mobile apps with an intelligent, personalized experience. Up and running in hours.

Broadcast Platform POWERED BY CERKL

IT Benefits, Impact

- In working with Internal Communications IT will no longer have to: Create Distribution Lists, Sync Distribution Lists, Track email deliverability, Manually Pull people data, Generate reports, Offer analytics, reports, insights
- This will result in less tickets, phone calls

IT's Investment

- No code people data integration
- Dedicated IP, reverse DNS setup
- Adjust email security to preserve Broadcast analytics
- Automatic image download
- Branded email links setup
- Sender authentication

Integrations

- Content — Your existing content channels (e.g., SharePoint) can be integrated into Broadcast for distribution using the Broadcast API.
- People Data — Your people data can be integrated into Broadcast using our no-code process which allows organizations to map 1 or more sources of people data to Broadcast.
- Data is only available to Broadcast when it is pushed by you.

Why do Employee Newsletters Matter?

The value of employee newsletters hasn't changed. It's just their creation, format, and distribution options that have changed — a lot.

So, why are newsletters important? Here are a few key factors to consider when you decide what you are going to put into each new employee newsletter:

Employee newsletters provide a central platform to share important company updates, announcements, and industry news. This keeps everyone informed about what's happening within the organization, fostering a sense of transparency and trust between employees and leadership.

Organizations can use newsletters to recognize employee achievements, celebrate milestones, and share company stories. This helps employees feel valued and connected to the bigger picture, contributing to a more positive and engaged company culture.

Newsletters can showcase different departments or teams, allowing employees to learn about each other's work. This can spark collaboration and break down silos within the organization.

Ultimately, content is king. Get it right, and you'll reap its benefits. Just remember that employees are humans. Speak to them like humans.

Other HTML-Based Options

The good news is that you don't have to be able to write HTML code from scratch to design newsletters using HTML. There are a few applications that cater to different levels of technical expertise.

Furthermore, leveraging pre-built templates, drag-and-drop editors, and potentially some basic HTML knowledge, you can design effective newsletters using HTML even without extensive coding experience.

Pre-Designed Templates

Many email marketing platforms and services offer collections of ready-built HTML templates specifically designed for newsletters. These templates come with a predefined structure and layout, often with customizable elements like colors, fonts, and logos.

[PHOTO]

Drag-and-Drop Editors

Several online tools and services offer drag-and-drop editors specifically designed for creating HTML newsletters. These tools provide pre-built elements like text boxes, images, buttons, and more. You can simply drag and drop these elements onto a canvas to build your newsletter layout.
