

CerkI Broadcast vs. Viva Amplify

Deliver consistent communications, prioritize what matters, and get deep insights across every channel.

	Viva Amplify A native Microsoft 365 add-on for campaign-based communications	CerkI Broadcast · Omni AI An AI-powered communications platform built for the enterprise
Communication Consistency One message, delivered the right way, every time.	— Limited consistency controls Relies on decentralized publishing across multiple M365 tools and sites, making it harder to maintain brand, governance and message alignment.	✓ Enterprise-wide consistency by design Centralized content hub, templates, approval workflows and brand guardrails keep every message on-brand and aligned across channels and locations.
Prioritizing What Matters Cut through the noise; focus on what's important.	— Basic targeting and prioritization Audiences and campaigns are limited and don't optimize or elevate messages based on importance or engagement.	✓ AI-driven prioritization Omni AI surfaces the right content, at the right time, to the right people—so your most important messages get seen and acted on.
In-Depth Insights & Analytics Understand impact across every channel.	— Siloed, surface-level reporting Stays inside Microsoft 365 and reports anonymized aggregate "unique viewers," not per-recipient reads—a send via a distribution group can register as a single viewer.	✓ Comprehensive, cross-channel analytics Deep, unified insights across email, intranet, Teams, Slack and mobile—per-employee opens, reads and acknowledgments: what resonates, and who still needs it.
Reach Across Every Channel Meet employees where they are.	— Microsoft-centric reach Best within M365 channels; limited ability to reach employees outside the Microsoft ecosystem or on non-Microsoft platforms.	✓ Truly omnichannel Publish once and reach everywhere—email, intranet/SharePoint, mobile app, Teams, Slack and microsites—your entire workforce, not just M365 users.
AI & Intelligence Use AI to save time and improve results.	— Basic AI capabilities Limited AI for content creation and summarization within Viva Amplify; no cross-channel personalization or recommendations.	✓ Omni AI: your advantage, opt-in by design AI that works for you—content creation, personalization, audience intelligence and recommendations you switch on when ready. Assistive, never on autopilot.
Total Value Maximize impact and realize ROI.	— Add-on with limitations Additional licensing for a tool with limits that often needs other solutions to fill the gaps.	✓ Stronger ROI, faster impact A purpose-built platform that drives higher engagement, better outcomes and clear ROI—without stitching together multiple tools.

Scale on your terms
NOT ALL-OR-NOTHING

1

Crawl — stand up measured email

>

2

Walk — add channels when ready

>

3

Run — layer in AI, opt-in

The goal

Consistency, prioritization, and deep insights across every channel employees use.

Viva Amplify

Built for Microsoft—not for how modern teams communicate today, or need to tomorrow.

CerkI Broadcast + Omni AI

Brings consistency, prioritization and measurable insight together—so every message matters and every channel counts.
