

Cerkl Broadcast vs. Microsoft Viva Engage

O

Read confirmations from a social feed

Engage tracks views, reactions, and replies — not whether a person read a must-read message.

Pull

Engage is opt-in by design

Content lives in a feed employees must visit — nothing guarantees the message is seen.

\$0

Cerkl Broadcast Foundations

Targeted internal email that lands in the inbox — with per-employee read analytics, free.

✓ A feed, not delivery

Viva Engage is the Yammer successor: communities, Storyline, Leadership Corner, Stories. It's built for culture, conversation, and recognition — content employees discover by choosing to visit the feed. That's a different job from making sure a specific message reaches a specific person. A fine place for community; not a system for must-read communication.

✓ Proof it landed

With no comms metrics today, this shows up immediately. Engage offers social-style analytics — views, reactions, community activity — not per-message read confirmation. Cerkl's Insights (redesigned May 2026) shows opens, reads, and acknowledgments per employee: exactly who saw the open-enrollment notice or safety bulletin, and who still needs a follow-up.

✓ Reaching everyone

Because Engage is opt-in, anyone who never opens the feed simply misses the post — a real risk for deskless and frontline staff. Cerkl delivers to the inbox and channels people already check, plus mobile and microsites. Flagger Force reaches 2,000 employees across 10+ states; St. Elizabeth sees a 54% employee open rate.

✓ Not another network

If a social feed feels like the wrong fit for serious internal communication, that instinct is sound. Cerkl isn't a social network competing for attention — it's structured, targeted email plus measurement, built for communicators. Keep Engage for culture; use Cerkl to make sure the messages that matter reach everyone and get read.

A feed is built for culture and conversation — not the open-enrollment deadline or the safety bulletin. Cerkl makes those land, and proves it.

— Why a feed isn't a comms strategy
