

Cerkl Broadcast vs. Viva Engage

Deliver consistent communications, prioritize what matters, and get deep insights across every channel.

	Viva Engage An employee community & engagement platform (Yammer successor)	Cerkl Broadcast · Omni AI An AI-powered communications platform built for the enterprise
Communication Consistency One message, delivered the right way, every time.	– Limited controls for consistency Built for community and conversation; one-to-many, governed messaging is harder to enforce for brand, message hierarchy and governance at scale.	✓ Enterprise-wide consistency by design Centralized content hub, templates, approval workflows and brand guardrails keep every message on-brand and aligned across channels and locations.
Prioritizing What Matters Cut through the noise; focus on what's important.	– Feeds are conversation-first Algorithmic feeds prioritize conversations and trending posts, making it difficult to ensure important announcements rise above the noise.	✓ AI-driven prioritization Omni AI surfaces the right content, at the right time, to the right people—so your most important messages get seen and acted on.
In-Depth Insights & Analytics Understand impact across every channel.	– Siloed, surface-level insights Community engagement metrics only—views, reactions, replies. No per-recipient read confirmation and no unified, cross-channel view of message impact.	✓ Comprehensive, cross-channel analytics Deep, unified insights across email, intranet, Teams, Slack and mobile—per-employee opens, reads and acknowledgments: what resonates, and who still needs it.
Reach Across Every Channel Meet employees where they are.	– Microsoft ecosystem confined Primarily within Microsoft 365 (desktop, mobile, Teams) and opt-in—employees who don't visit the feed miss the message. Limited reach to non-Microsoft channels.	✓ Truly omnichannel Publish once and reach everywhere—email, intranet/SharePoint, mobile app, Teams, Slack and microsites—your entire workforce, not just feed visitors.
AI & Intelligence Use AI to save time and improve results.	– Basic AI capabilities AI for content creation, summarization and sentiment within Engage, but no cross-channel personalization or delivery recommendations.	✓ Omni AI: your advantage, opt-in by design AI that works for you—content creation, personalization, audience intelligence and recommendations you switch on when ready. Assistive, never on autopilot.
Total Value Maximize impact and realize ROI.	– Add-on with limitations Requires Microsoft 365 licensing; additional tools often needed to achieve enterprise-grade communications and analytics.	✓ Stronger ROI, faster impact A purpose-built platform that drives higher engagement, better outcomes and clear ROI—without stitching together multiple tools.

Scale on your terms
NOT ALL-OR-NOTHING

1

Crawl — stand up measured email

>

2

Walk — add channels when ready

>

3

Run — layer in AI, opt-in

The goal

Consistency, prioritization, and deep insights across every channel employees use.

Viva Engage

Great for community and conversation—not built for enterprise comms, consistency, or cross-channel insight.

Cerkl Broadcast + Omni AI

Brings consistency, prioritization and measurable insight together—so every message matters and every channel counts.
